#### Outcomes of chapter seven:

#### At the end of chapter seven, your child will be able to:

#### ▶ Lessons 1 & 2:

- Associative property of multiplication
- · Distributive property of multiplication
- Explain the associative property of multiplication.
- Apply the associative property of multiplication to solve problems.
- Explain the distributive property of multiplication.
- Apply the distributive property of multiplication to solve problems.
- Collaborate to define math terminology in his/her own words.

#### Lesson 3:

#### **Estimating multiplication**

- Apply strategies to estimate products.
- Apply properties and strategies to solve multiplication problems.
- Explain chosen problem-solving strategies.

#### ▶ Lessons 4 & 5 :

- Applications on multiplication and division
- Strategies for multiplication and division
- Explain the relationship between multiplication and division.
- Solve multiplication and division problems with an unknown number.
- Explain how he/she can use the relationship between multiplication and division to solve problems.
- Identify a variety of multiplication and division problem-solving strategies.
- Apply more than one strategy to solve multiplication and division problems with an unknown number.
- Justify the use of preferred problem-solving strategies.

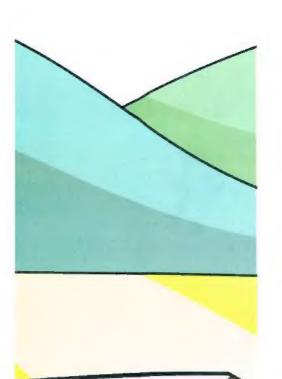

#### ▶ Lesson 6:

#### Perimeter of a square and a rectangle

Solve perimeter problems involving an unknown side length.

#### Lessons 7 to 9:

- Two-step story problems
- Strategies for solving two-step story problems
- Writing story problems
- Solve two-step story problems involving addition, subtraction, multiplication, or division.
- Explain the strategies he/she use to solve complex story problems.
- Analyze solutions to two-step problems to identify and explain the errors made.
- Explain the benefits of error analysis in improving thinking and learning.
- Apply multiple strategies to solve two-step story problems.
- Justify problem solving strategies.
- Write two-step problems involving any operation.

- Associative property of multiplication
- Distributive property of multiplication

### Learn 1 Associative property of multiplication

- You can use associative property when you multiply 3 or more numbers, you can choose which 2 numbers you want to multiply first using parentheses.
- The Associative (grouping) Property of Multiplication says that you can change the grouping of the factors, and the product will be the same.

### Example (1)

Show three ways to find  $3 \times 2 \times 4$ 

Remember .....

Commutative property

$$2 \times 4 = 4 \times 2$$

#### First way:

Multiply 3 and 2 first.

$$= (3 \times 2) \times 4$$

$$= 6 \times 4 = 24$$

$$(3 \times 2) \times 4$$

#### Second way:

Multiply 2 and 4 first.

$$= 3 \times (2 \times 4)$$

$$= 3 \times 8 = 24$$

$$3 \times (2 \times 4)$$

#### Third way:

Change the order and multiply 3 and 4 first.

$$=3\times4\times2$$

$$= (3 \times 4) \times 2$$

$$=$$
 **12**  $\times$  2  $=$  24

$$(3 \times 4) \times 2 = 24$$

#### Math tip

To find  $12 \times 2$  you can use:

- Repeated addition  $12 \times 2 = 12 + 12 = 24$
- Skip counting by 2s 12 times: 2, 4, 6, 8, 10, 12, 14, 16, 18, 20, 22, (24)

### Check (

Use parentheses and show three ways to find  $2 \times 5 \times 3$ .

$$2 \times 5 \times 3$$

$$2 \times 5 \times 3$$

$$2 \times 5 \times 3$$

· Remind your child with commutative property of multiplication which says that "you can multiply in any order and the product will be the same".

### Learn 2 Distributive property of multiplication

Distributive property tells us we can divide "break apart" a multiplication problem into two or more smaller problems, then add together their products and get the final answer.

### Example (2)

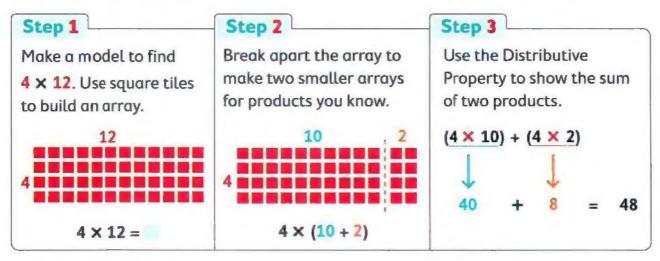

#### Multiply 4 × 12

#### Solution 🗸

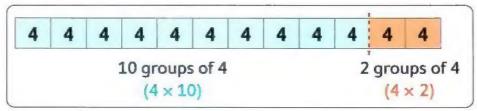

There are more than one correct way to break apart.

One Way: Using array

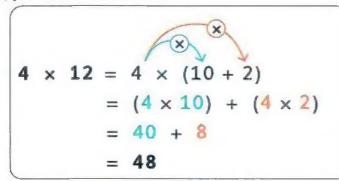

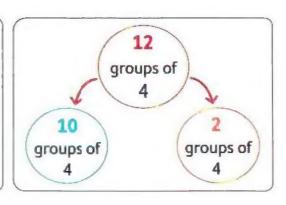

Other way: Using bar model

So, you can deduce that:

<sup>•</sup> Tell your child that he/she can use distributive property to solve problems that involve large numbers.

### Example (3)

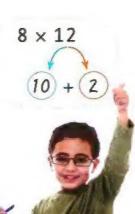

Use the properties and mental math to multiply  $8 \times 12$ .

Solution 🗸

• 8 × 12 = 8 × (10 + 2)  
= 
$$(8 \times 10) + (8 \times 2)$$
  
=  $80 + 16$   
=  $96$ 

Think: 12 = 10 + 2Distributive property

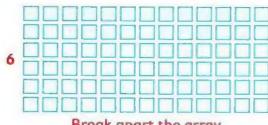

· By using bar model

8	8	8	8	8	8	8	8	8	8	8	8	
		:	L0 gr	oups	of 8					2 gr	oups	of 8
		10 groups of 8 $(8 \times 10)$								(	8 x 2	2)

$$8 \times 12 = 8 \times 10 + 8 \times 2$$
  
= 80 + 16 = 96

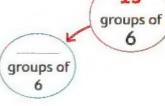

## Check (

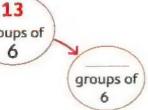

Multiply 6 x 13

Break apart the bar model

Complete the model.

$$(2 \times 1) \times 3 = 2 \times (1 \times \underline{\hspace{1cm}})$$

**b.** 
$$(3 \times 2) \times 6 =$$
\_\_\_\_\_  $\times (2 \times 6)$ 

**c.** 
$$(5 \times 2) \times 4 = (5 \times ___) \times 2$$

**d.** 
$$(4 \times 3) \times 1 = 4 \times (\underline{\hspace{1cm}} \times 3)$$

**e.** 
$$(3 \times 2) \times 3 = (3 \times 3) \times$$

**f.** 
$$(5 \times 1) \times 6 = (\underline{\hspace{1cm}} \times 1) \times 5$$

#### 2 Circle all the correct statements that have the same value.

a. 
$$3 \times 2 \times 4$$

b. 
$$3 \times 1 \times 2$$

c. 
$$4 \times 2 \times 1$$

d. 
$$2 \times 5 \times 3$$

#### **Second: Exercises on Distributive Property**

#### 12 Break apart the following bar models according to the distributive property equations.

a.	6	6	6	6	6	6	6	6

$$6 \times 8 = (6 \times 2) + (6 \times 6)$$

$$12 \times 9 = (12 \times 4) + (12 \times 5)$$

$$9 \times 7 = (9 \times 1) + (9 \times 6)$$

$$4 \times 6 = (4 \times 2) + (4 \times 4)$$

$$7 \times 6 = (7 \times 3) + (7 \times 3)$$

$$8 \times 8 = (8 \times 3) + (8 \times 5)$$

#### 13 Write the distributive property equations of each.

a. 
$$7 \ 7 \ 7 \ 7 \ 7 \ 7 \ 7 \ 7$$

14 Break apart the following bar models. Use the distributive property to complete the equations and find the product.

## Challenge 6

#### 21 Farouk had the following problem to solve:

Use what you know about the properties of multiplication to find the missing number.

$$3 \times 5 = (3 \times 2) + (3 \times 2)$$

Farouk said, "The missing number is 5 because the Associative Property tells me I can break the problem into smaller chunks, so I just changed the grouping."

What mistakes did Farouk make? What would you tell him to help him correct his thinking and his work? Record your answer in the box below.

### **Estimating multiplication**

- Estimation does not give the exact answer but gives a closer answer.
- There are 7 boxes, each box contains 6 balls. How many balls are there in all?

The actual problem is 7 x 6

Nada knows that

$$5 \times 5 = 25$$

So, she said that the product must be greater than 25

Yasser supposed 6 as 5 and multiplied them

$$7 \times 5 = 35$$

So, he said that the product should be a little more than 35

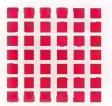

Amira supposed 7 as 10 and multiplied them

$$10 \times 6 = 60$$

So, she said that the actual product must be less than 60

The actual product is 42, Yasser gives the closest estimation and it is acceptable estimation.

#### First The estimation of product of 2 numbers

### Example (1

Estimate the answer, then find the actual result of  $9 \times 7$ 

#### Estimation

$$10 \times 7 = 70$$

The actual product

Suppose 7 as 5

$$9\times 5=45$$

The actual product must be less than 70 | must be more than 45

#### Actual product

$$9 \times 7 = 63$$

#### Notes for parents

Tell your child that estimation tells about how many not are actual value.

### Example (2)

Estimate the answer, then find the actual result of  $9 \times 13$ 

#### Solution \( \square

#### Estimation

#### Actual product

+ 27

$$9 \times 13 = 9 \times (10 + 3)$$
 Distributive property

$$10 \times 13 = 130$$

$$9 \times 10 = 90$$

$$=(9 \times 10) + (9 \times 3)$$

The estimation of product of 3 numbers.

### Example (3)

Estimate the answer, then find the actual result of  $4 \times 6 \times 5$ 

#### Solution V

#### Estimation

#### Actual product

Suppose 4 as 5, use associative property.

$$(5 \times 6) \times 5$$

$$= 30 \times 5 = 150$$

$$4 \times (6 \times 5)$$
 Associative property

The answer must be less than 150

### Pre-study

Division

- To share things equally, you can divide.
- 12 sweets are divided among 3 children. How many sweets does each child get?

Separate 12 sweets into 3 equal groups.

Divide separate some things into equal groups.

Each child gets 4 sweets.

The division sentence :  $2 \div 3 = 4$ 

• By representing the problem with part - part - whole model.

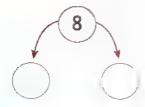

#### Hint

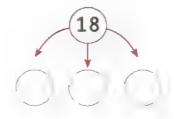

Use skip count by 3s to get 12. 3,6,9,(12) You skiped 4 times.

## Check (

Divide. Fill in the part-part-whole model.

#### Learn Applications on multiplication and division "Fact family"

• The band played 5 songs during the halftime of the football game. Each song was 3 minutes long. How long did the band play?

Equation:  $5 \times 3 = ?$ 

Think  $: 5 \times 3 = 15$ 

- So, the band played for 15 minutes.
- The band played for 15 minutes at another football game. Each song was 3 minutes long. How many songs did the band play?

#### Remember

- Product the answer to a multiplication problem.
- Ouotient the answer to a division problem.
- Fact family a set of related facts.
- Inverse operation operation that undo each other (addition - subtraction) & (multiplication division)

Equation:  $15 \div 3 = ?$ 

Think:

So,

• So, the band played 5 songs.

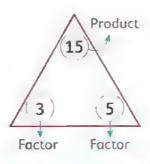

MATH IDEA Multiplication and division by the same number are opposite operations, or inverse operations. One operation undoes the other.

 A set of related multiplication and division equations using the same numbers is a fact family.

$$5 \times 3 = 15$$
  $15 \div 3 = 5$   
 $3 \times 5 = 15$   $15 \div 5 = 3$  Fact family for 3, 5, 15

Fact family triangle

Ask your child to write the fact family of: 2, 3, 6 and 4, 7, 28.

### Example (1)

Fill in the missing numbers of the following. Complete the fact family for each.

**a.** 
$$5 \times 8 = 40$$

$$--- \times 5 = 40$$

$$40 \div 8 =$$

**b.** 
$$3 \times 9 = ---$$

$$\times 3 = 27$$

$$--- \div 9 = 3$$

$$-\div 3 = 9$$

$$7 \times = 42$$

$$\div 6 = 7$$

#### Solution 🗸

**a.** 
$$5 \times 8 = 40$$

$$8 \times 5 = 40$$

$$40 \div 8 = 5$$

$$40 \div 5 = 8$$

**b.** 
$$3 \times 9 = 27$$

$$9 \times 3 = 27$$

$$27 \div 9 = 3$$

$$27 \div 3 = 9$$

**c.** 
$$6 \times 7 = 42$$

$$7 \times 6 = 42$$

$$42 \div 7 = 6$$

$$42 \div 6 = 7$$

### Example (2)

Complete.

$$a. 3 \times --- = 21$$

**d.** 
$$35 \div 7 =$$

**b.** 
$$\times 4 = 24$$

**e.** 
$$---\div 6 = 10$$

**c.** 
$$18 \div 3 =$$

**f.** 
$$56 \div = 8$$

### Solution V

**a.** 
$$3 \times 7 = 21$$

**e.** 
$$\div 6 = 10$$

$$f. 56 \div = 8$$

**b.** 
$$6 \times 4 = 24$$

Think: 
$$3 \times ? = 18$$
 So,  $3 \times [6] = 18$ , then  $18 \div 3 = 6$ 

Think: 
$$7 \times ? = 35$$
 So,  $7 \times \boxed{5} = 35$ , then  $35 \div 7 = 5$ 

Think: 
$$6 \times 10 = 60$$
 So,  $60 \div 6 = 10$ 

Think: 
$$8 \times ? = 56$$
 So,  $8 \times \boxed{7} = 56$ , then  $56 \div 7 = 8$

### Perimeter of a square and a rectangle

#### Learn 1 Finding the perimeter of square and rectangle

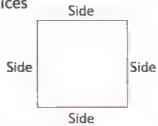

**Remember:** Perimeter is a liner measurement of the distance around the shape.

#### Sauare

#### It has:

- 4 equal sides in length
- 4 vertices

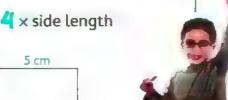

Example:

Perimeter = side length + side length

+ side length + side length

= 4 x side length

Add all

the sides

to check

5 cm 5 cm 5 cm

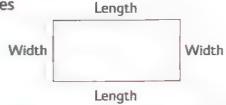

Perimeter =  $4 \times 5$ 

= **20** cm

#### Per i merito

#### It has:

- 4 sides "2 short parallel with the same length 2 long parallel with the same length"
- 4 vertices

Perimeter = length + width + length + width

$$= 2 \times \text{length} + 2 \times \text{width}$$

$$=$$
  $\frac{2}{\times}$  (length + width)

#### Example:

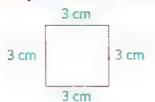

6 cm

Perimeter = 
$$2 \times (6 + 4)$$

Add all the sides to check

### Check (

#### Find the perimeter in each of the following.

The perimeter =

The perimeter =

34

#### **Notes for parents**

 Remind your child with the properties of each of square and rectangle to be able to calculate their perimeters.

### Learn 2 Finding the unknown length given the perimeter

### Example (1)

Find the side length of the square which its perimeter is 20 cm.

#### Solution 🗸

Where perimeter = 20 cm

4 × ? = 20 So.

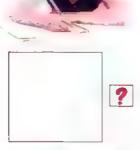

Think :  $20 \div 4 = 5$ 

Then, the side length = 5 cm

#### Chart went

Side length = perimeter  $\div$  4

So, side length =  $20 \div 4 = 5$  cm

Perimeter = 20 cm

### Example (2)

Find the length of the rectangle which its width is 2 cm, and its perimeter is 12 cm.

#### Solution 🗸

Where perimeter = 12 cm

 $2 \times (length + width) = 12$ 

Then: 2 ×

Think : 12 ÷

= 6

Then, length + width = 6

Think: 6 - 2 = 4

Then, the length = 4 cm

Perimeter = 12 cm

#### Short way

The length =  $(perimeter \div 2) - width$ 

So, the length =  $(12 \div 2) - 2$ 

= 6 - 2 = 4 cm

### Check (

Use the information in each of the following to find the unknown side.

Perimeter = \_\_\_\_ cm 4 × ? = \_\_\_

The side length =

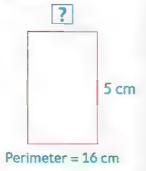

? Perimeter

= 24 cm

Perimeter = \_\_\_\_ cm  $length + width = __ ÷ 2$ 

width = \_\_\_\_ = \_\_

The width = cm

#### How do you solve two-step story problems?

- Two-step story problem is a problem that involve two operations.
- Some story problems have hidden question or questions that must be answered before you can solve the problem.

You have to determine what operation to use and what strategies will you use to help you figure out how to solve the problem.

#### Notice the following key words

- Addition Add, Sum, In all, Plus, Total, Altogether

Subtraction Subtract, Remainder, Difference, Less than, Minus, Left

Multiplication Multiply, Product, Times, Twice, Triple

Division Divide, Equally, Distribute

Dina bought 3 packs of crayons. Each pack contains 12 crayons. If she gave her friend 6 crayons of them.

How many crayons are left?

Using multiplication and subtraction operations

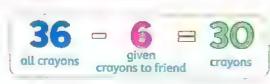

Find the hidden question:

How many crayons did Dina buy?

- 🔍 Dina bought 🕉 crayons in all.
- Solve the problem:

How many crayons are left?

- Use distributive property  $3 \times 12 = (3 \times 10) + (3 \times 2)$ = 30 + 6(10+2)=36
- Repeated addition  $3 \times 12 = 12 + 12 + 12 = 36$

 $(3 \times 12) - 6 = 36 - 6 = 30$ 

🥄, The left crayons are 🕉 crayons.

#### Notes for parents

· Let your child discover and solve the hidden question and ask him/her if he/she could solve the problem using the short way.

Using addition and subtraction operations -

Dina bought 3 packs of 12 crayons

$$12 + 12 + 12 = 36$$

She gave 6 to her friend

$$36 - 6 = 30$$

The left crayons are 30 crayons.

Charles and the second

#### Example 3

Sara had 29 L.E. If she saved 15 L.E. and distributed the rest equally between her two sisters.

How much money will each sister have?

Using subtraction and division operations -

How much money are left after Sara saved 15 L.E. of them?

- Sara distributed M L.E. between her two sisters.
- Solve the problem:

How much money will each sister have?

$$(29 - 15) \div 2$$
  
= 14 ÷ 2  
= 7

Lech sister will have 7 L.E.

Write and answer the hidden question. Then solve the problem.

## Comparing unit fractions using models

You can use fraction strips to compare fractions.

#### For example:

To compare  $\frac{1}{2}$  and  $\frac{1}{6}$ , do as follows:

#### Step 1

Line up  $\frac{1}{2}$  and  $\frac{1}{6}$  fraction strips under the bar for 1.

#### Step 2

Compare the size of fraction strips.

• The strip of  $\frac{1}{2}$  is longer than the strip of  $\frac{1}{6}$ 

So 
$$\frac{1}{2}$$
 >  $\frac{1}{6}$ 

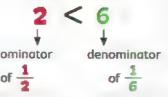

or 
$$\frac{1}{6} < \frac{1}{2}$$

#### From previous example notice that:

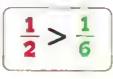

and

$$\frac{1}{2}$$
 and  $\frac{1}{6}$  have the same numerator (1)

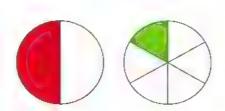

# GENERALLY

When comparing unit fractions, the one with the lesser denominator is greater because the whole is divided into fewer pieces, so the pieces are larger.

If you work with a circle fraction models.

Is 
$$\frac{1}{2}$$
 still larger than  $\frac{1}{6}$ ?

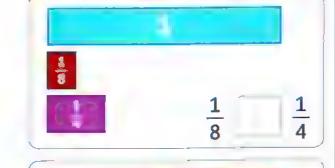

#### Notes for parents

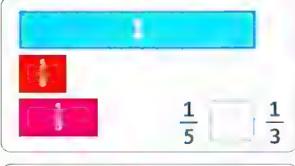

Make sure that your child remembers to line up strips when he/she compare them.

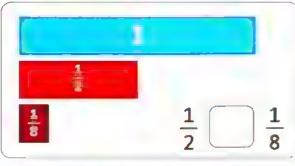

1. Compare. Write > or <. You may use fraction strips to help.

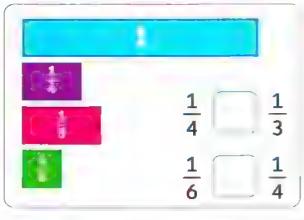

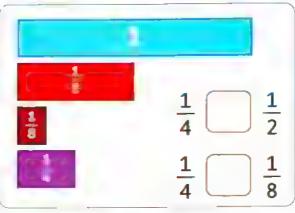

2. If you made a model for  $\frac{1}{10}$ , would it be bigger or smaller than  $\frac{1}{8}$ ? Why do you think so?

#### Which is bigger?

• The quantity represented by a fraction depends on the size of the whole.

#### First case If the wholes have the same size.

Bassem, Mina and Marwan have 3 crackers of the same size. Each cracker has 4 equal parts.

Bassem's cracker

Mina's cracker

Marwan's cracker

#### How are the parts of the 3 crackers alike? How are they different?

- The parts of each cracker show  $\frac{1}{4}$  of the cracker.
- $\frac{1}{4}$  of Mina's cracker has the same size and the same shape of  $\frac{1}{4}$  Bassem's cracker.
- $\frac{1}{4}$  of Marwan's cracker has the same size of  $\frac{1}{4}$  of Bassem's cracker, but they have different shape.

Second case If the wholes have different sizes.

Amal and Bassma have 2 pies of different size. Each pie has 3 equal parts

Is  $\frac{1}{3}$  of Amal's fruit pie the same size

as  $\frac{1}{3}$  of Bassma's pie? Why or why not?

No, Bassma's whole pie is bigger.

So,  $\frac{1}{3}$  of her pie is bigger.

#### Amal's pie

Bassma's pie

#### Relation between fractions and division

Twelve students signed up to play in a swimming tournament.

One third of the students who signed up are girls. How many girls will play in the swimming tournament?

Find  $\frac{1}{3}$  of 12

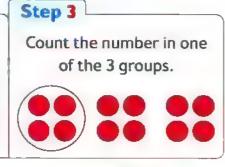

To find that you can follow the following steps:

Step 2

Math tip

The denominator 3, tells you to make 3

groups. The numerator 1 , tells you to count 1

of the groups.

There are 4 counters in one group.  $\frac{1}{3}$  of 12 = 4So, 4 girls will play in the swimming tournament.

You can think about division to find a fraction of a number, for example :

Find  $\frac{1}{3}$  of 21.

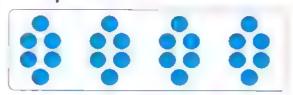

Divide 21 into 3 equal groups.

$$21 \div 3 = 7$$

 $\frac{1}{3}$  of 21 is 7

Find  $\frac{1}{4}$  of 24.

Divide 24 into 4 equal groups.

$$24 \div 4 = 6$$

 $\frac{1}{4}$  of 24 is 6

#### **Notes for parents**

#### **Outcomes of chapter nine:**

At the end of chapter nine, your child will be able to:

#### ▶ Lessons 1 & 2 :

- Representing fractions on a number line
- Comparing unit fractions using a number line
- Use models to show fractions on a number line.
- Show fractions on a number line to solve story problems.
- Given a fraction, explain the relationship between the number of equal parts on a number line and the denominator.
- Define numerator and denominator in his/her own words and provide examples.
- Locate unit fractions on a number line (0 to 1).
- Compare unit fractions on a number line between 0 and 1.

#### ▶ Lessons 3 & 4 :

- Comparing fractions using models
- Comparing fractions using a number line
- Model fractions with numerators greater than 1.
- · Divide a number line into a given number of equal parts.
- · Locate proper fractions on a number line.
- Draw models of fractions using shapes or sets.
- · Count forward and backward by fractions.
- · Read and write proper fractions.
- Compare unit and proper fractions.

#### ▶ Lesson 5 :

- Comparing two fractions with the same numerator or denominator
- Compare two fractions with the same denominator.
- Compare two fractions with the same numerator.
- Explain how to compare fractions.

#### ▶ Lessons 6 & 7 :

- Adding two fractions with the same denominator
- Subtracting two fractions with the same denominator
- · Add two fractions with the same denominator.
- Explain the importance of common denominators when adding fractions.
- Subtract fractions with the same denominator.
- Explain how to add and subtract fractions with common denominators.

#### ▶ Lesson 8 :

- Story problems on adding and subtracting fractions
- Apply understanding of fractions to solve real-world problems.
- Write a real-world story problem involving fractions.

- Representing fractions on a number line
- Comparing unit fractions using a number line

## Learn 1 How to represent fractions on a number line

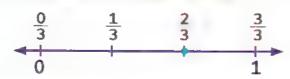

You can use a ruler to represent fractions on the number line.

a Draw a line. Mark 0 on the left and mark 1 on the right. The space from 0 to 1 represents 1 whole.

b The denominator of a fraction helps you to know the number of equal parts that you need to divide the space from 0 to 1.

This number line shows thirds. It is divided into 3 equal parts.

The point shows the location of  $\frac{2}{3}$ .

This number line shows fourths. It is divided into 4 equal parts.

The point shows the location of  $\frac{3}{4}$ .

• Although you have not yet introduced proper fractions beyond unit fractions, allow your child to label number lines with non-unit fractions (for example,  $\frac{2}{4}$  and  $\frac{3}{4}$ ) This will help him/her build familiarity with other fractions and their relationship to unit fractions.

## **Learn**

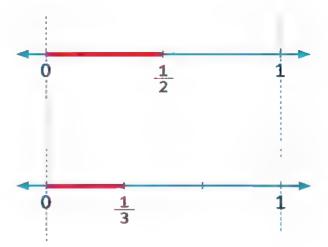

#### Learn 2 Comparing unit fractions using a number line

You studied before how to compare unit fractions using fraction strips.
 In this lesson, you will compare fractions using number line.

**Example:** Compare  $\frac{1}{2}$  and  $\frac{1}{3}$ 

To compare  $\frac{1}{2}$  and  $\frac{1}{3}$ , do as follows:

- Draw a number line.
   Mark and label the points of 0 and 1, and then divide the distance between them into halves and label <sup>1</sup>/<sub>2</sub>.
- Oraw another number line below. Be sure the points that correspond to 0 and 1 line up directly beneath one other. Divide the distance between 0 and 1 into thirds and label  $\frac{1}{3}$ .

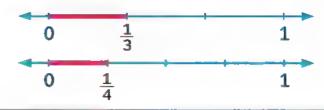

Since the distance from the point 0 to the point  $\frac{1}{2}$  is greater than the distance from the point 0 to the point  $\frac{1}{3}$ , then  $\frac{1}{2} > \frac{1}{3}$ 

## Check 🔘

## Pre-study What is a proper fraction?

 A proper fraction is a fraction its numerator is less than its denominator.

#### **Examples for proper fractions:**

3 parts are red.

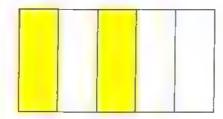

4 equal parts.

🛂 is red.

(Three fourths are red)

The unit fractions are also proper fractions.

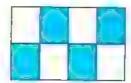

2 parts are yellow.

#### Notes for parents

 Draw a square and divide it into 4 equal parts. Color 3 of the parts. Have your child name the fraction that tells how much of the whole is colored.

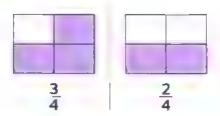

## Learn 1 Comparing fractions using models

You can draw models of fractions using shapes to compare fractions.

#### Example 1:

The colored parts for  $\frac{3}{4}$  are greater than the colored parts for  $\frac{2}{4}$ 

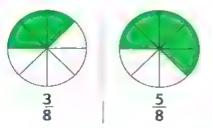

**So,** 
$$\frac{3}{4} > \frac{2}{4}$$

#### Example 2:

The colored parts for  $\frac{3}{8}$  are smaller than the colored parts for  $\frac{5}{8}$ 

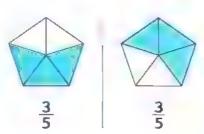

So, 
$$\frac{3}{8} < \frac{5}{8}$$

#### Example 3:

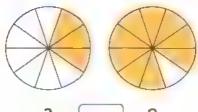

The colored parts for  $\frac{3}{5}$  in the two shapes are equal

**So**, 
$$\frac{3}{5} = \frac{3}{5}$$

## Check 🔘

Compare using ">,= or<".

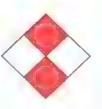

$$\frac{3}{10}$$

3 6

<sup>-</sup> Ask your child to show  $\frac{2}{8}$  using model .

## Learn 2 Comparing fractions using a number line

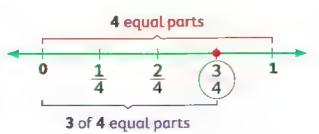

• Remember that you can divide the distance from **0** to **1** into equal parts and locate fractions on the number line.

#### **Example:**

Locate  $\frac{3}{4}$  on a number line.

To locate  $\frac{3}{4}$  on a number line, divide the distance from 0 to 1 into 4 equal parts.

Locate a point to show 3 of the 4 equal parts.

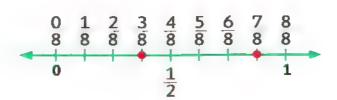

You can use the number line to compare fractions.

The number line represents values in ascending order from left to right. It means that the fraction which is marked on the left side is smaller than the fraction on its right.

#### Example:

 $\frac{3}{8}$  is on the left of  $\frac{7}{8}$ 

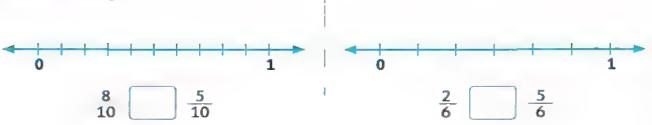

So,  $\frac{3}{8} < \frac{7}{8}$

## Comparing two fractions with the same numerator or denominator

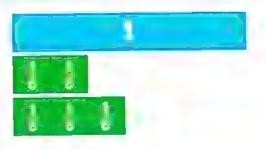

#### Learn 1 Comparing two fractions with the same denominator

You can compare two fractions with the same denominator in different ways.

Example

Compare  $\frac{2}{6}$  and  $\frac{3}{6}$ .

One way Use fraction strips.

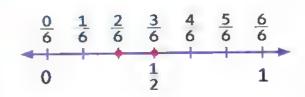

The strips for  $\frac{2}{6}$  are shorter than the strips for  $\frac{3}{6}$ .

So, 
$$\frac{2}{6} < \frac{3}{6}$$
 or  $\frac{3}{6} > \frac{2}{6}$ 

$$\frac{3}{6} > \frac{2}{6}$$

Another way Use number line.

 $\frac{3}{6}$  is to the right of  $\frac{2}{6}$ .

It is closer to 1.

So, 
$$\left[\frac{3}{6} > \frac{2}{6}\right]$$
 or  $\left[\frac{2}{6} < \frac{3}{6}\right]$ 

$$\frac{2}{6} < \frac{3}{6}$$

Third way Use models.

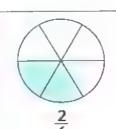

The colored parts for  $\frac{3}{6}$ .

are greater than the colored parts for  $\frac{2}{6}$ .

So, 
$$\frac{3}{6} > \frac{2}{6}$$
 or  $\frac{2}{6} < \frac{3}{6}$ 

$$\frac{2}{6} < \frac{3}{6}$$

#### - Mathematics Idea 🗝

When comparing fractions with like denominators, the one with the greater numerator is greater.

 $\frac{3}{6} > \frac{2}{6}$  because they have the same denominator "6" and 3 > 2.

#### Check (

## Learn 2 Comparing two fractions with the same numerator

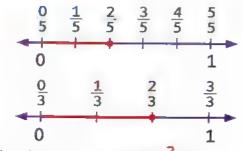

You can compare two fractions with the same numerator in different ways.

Example Compare  $\frac{2}{5}$  and  $\frac{2}{3}$ .

One way | Use fraction strips.

Another way | Use a number line.

The distance from 0 to  $\frac{2}{5}$  is shorter than the distance from 0 to  $\frac{2}{3}$ .

So, 
$$\frac{2}{5} < \frac{2}{3}$$
 or  $\frac{2}{3} > \frac{2}{5}$ 

$$\frac{2}{3} > \frac{2}{5}$$

Third way Use models.

The colored parts of  $\frac{2}{5}$  is less than

the colored parts of  $\frac{2}{3}$ .

So, 
$$\frac{2}{5} < \frac{2}{3}$$
 or  $\frac{2}{3}$ 

2		2
-	>	_

#### Mathematics Idea -

When comparing fractions with like numerators, the one with greater denominator is smaller.

### Learn 1 Adding fractions with the same denominator

Ahmed cut a pie into 6 equal pieces.

He ate 2 pieces. Sara ate 1 piece.

What fraction of the pie did they eat in all?

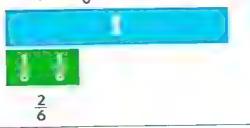

Add. 
$$\frac{2}{6} + \frac{1}{6}$$

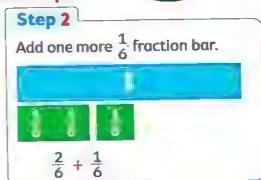

To add follow the following steps using fraction strips.

#### Step 1

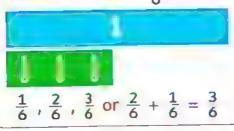

Line up two  $\frac{1}{6}$  fraction bars under the bar for 1.

Step 3

Count the number of  $\frac{1}{6}$  fraction bars.

So, Ahmed and Sara ate  $\frac{3}{6}$  of the pie.

#### 🦳 Mathematics Idea 🕆

To add fractions with common denominator, add the numerators and then write the sum over the common denominator.

## Check (

**a.** 
$$\frac{3}{5} + \frac{1}{5} =$$

**b.** 
$$_{10}^{5} + _{10}^{4} =$$

**c.**

**Notes for parents** 

• Ask your child to model the two fractions  $\frac{5}{8}$  and  $\frac{3}{8}$ , then find their sum.

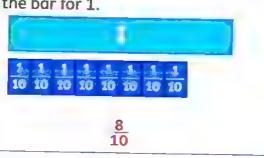

# Learn 2 Subtracting fractions with the same denominator

You can use fraction strips to subtract fractions with common denominator.

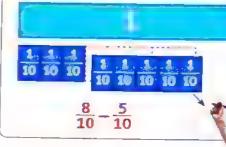

Subtract.  $\frac{8}{10} - \frac{5}{10}$ 

To substract follow the following steps using fraction strips.

Line up eight  $\frac{1}{10}$  fraction bars under the bar for 1.

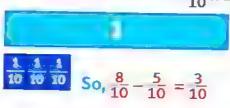

#### Step 3

Count the left number of  $\frac{1}{10}$  fraction bars.

## Mathematics Idea -

To subtract fractions with common denominator, subtract the numerators and then write the difference over the common denominator.

$$\frac{8}{10} - \frac{5}{10} = \frac{3}{10}$$
 (Think:  $8 - 5 = 3$ )

Find the difference.

13 In the box below write and solve your own two problems of adding and subtracting two fractions with the same denominator.

### Story problems on adding and subtracting fractions

Remember: You can add fractions with common denominator by adding their numerators.

Key words of Addition +

add plus sum in all total together

Example Julie cut a loaf of bread into 8 slices.

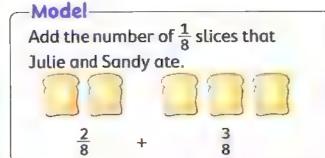

She ate 2 slices, or  $\frac{2}{8}$  of the loaf. Sandy ate 3 slices or  $\frac{3}{8}$  of the same loaf. What fraction of the loaf did they eat in all?

2 slices + 3 slices = 5 slices

So, Julie and Sandy ate  $\frac{5}{8}$  of the loaf.

Remember: You can subtract fractions with common denominator by subtracting their numerators.

Key words of Subtraction

difference subtract

left take away

remained

Example Maya had  $\frac{7}{12}$  of a sub sandwich left to share with

her friends. Her friends ate  $\frac{6}{12}$  of the sandwich.

What fraction of the sandwich is left?

Subtract. 
$$\frac{7}{12} - \frac{6}{12}$$

Subtract the number of  $\frac{1}{12}$  pieces that Maya's friends ate.

#### Record -

7 pieces – 6 pieces 1 piece

So,  $\frac{1}{12}$  of the sandwich is left.

#### Notes for parents

 Let your child choose a strategy to solve. He/she can use fraction strips, make a model or draw pictures.

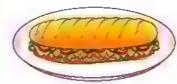

# Story problems on adding and subtracting fractions

From the school book

Solve the following story problems. You may show your thinking in words, numbers, and pictures.

1 Mohamed ate  $\frac{1}{6}$  of his sandwich at snack time and  $\frac{2}{6}$  of his sandwich at lunch.

How much of his sandwich did he eat in all?

How much does he have left?

3 Eman has  $\frac{8}{8}$  meter of fabric. She uses  $\frac{6}{8}$  meter to make a pillow.

8 meter to make a pittow.

How much of the meter of fabric is left?

The juice container at Farida's house was  $\frac{5}{6}$  full. Farida drank  $\frac{3}{6}$  of the container.

How much juice was left in the container?

Yesterday, Marawan ran  $\frac{2}{8}$  of a kilometer and then stopped to drink some water. After his water break, he ran another  $\frac{2}{8}$  of a kilometer.

What fraction of a kilometer did Marawan run yesterday?

6 Wagdy's house is  $\frac{2}{3}$  of a kilometer from school. Taha's house is  $\frac{1}{3}$  of a kilometer from school.

Who lives closer to school?

Maha and Nagi baked cakes that were the same size.

Maha gave  $\frac{3}{4}$  of her cake to her calss.

Nagi gave  $\frac{1}{2}$  of his cake to his class.

Which class received more cake, Maha's class or Nagi's class?

### Challenge (6)

Samir cut a pie into 8 equal slices.

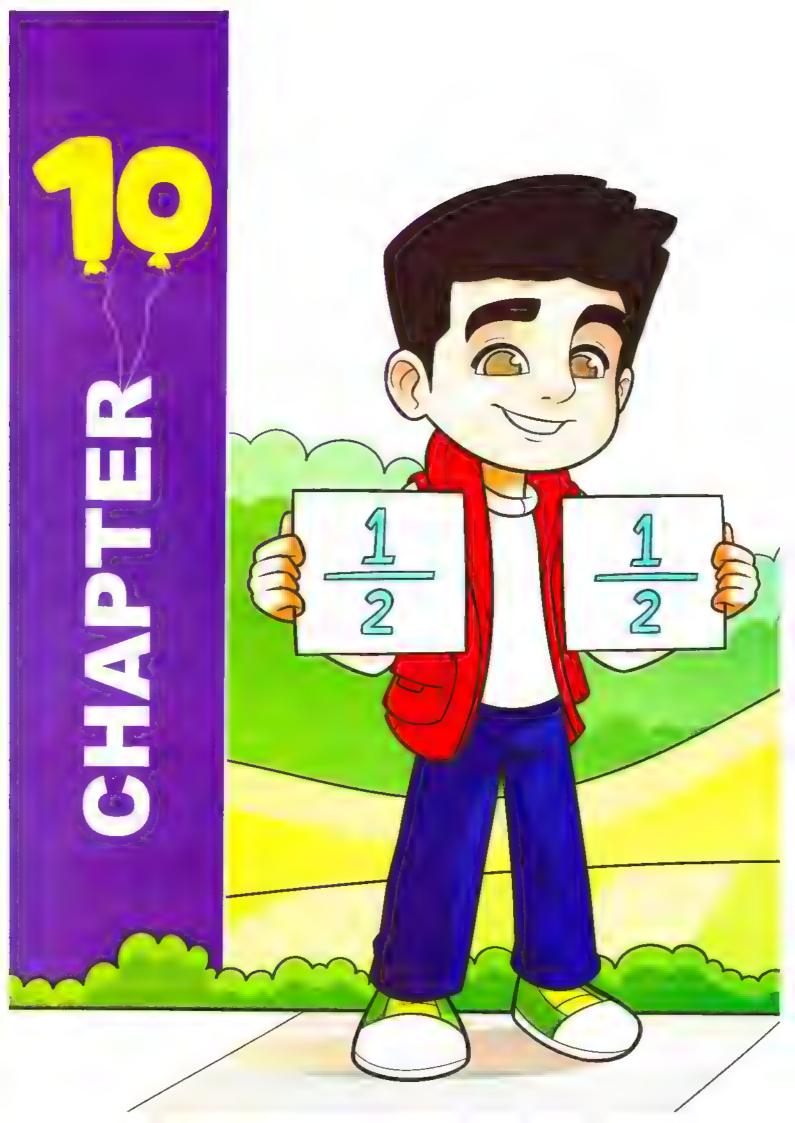

He shared the pie with 5 of his friends.

Samir and each of his friends ate 1 piece of the pie.

What fraction of the pie is left?

#### Outcomes of chapter ten:

#### At the end of chapter ten, your child will be able to:

#### ▶ Lesson 1 :

- · Equivalent fractions of a half
- Use fraction models to find fractions equivalent to  $\frac{1}{2}$ .
- Use drawings and number lines to find equivalent fractions.
- Explain which model he/she prefer to use to find equivalent fractions.

#### ▶ Lessons 2&3 :

- More of equivalent fractions
- Patterns of equivalent fractions
- Use concrete models to identify equivalent fractions other than  $\frac{1}{2}$ .
- Match equivalent fractions.
- Explain why two fractions are or are not equivalent.
- Define the term equivalent.
- Find equivalent fractions.
- Describe patterns and relationships between numerators and denominators in equivalent fractions.

#### Lesson 4:

- Equivalent fractions with the number line
- Use a number line to generate and show equivalent fractions.

#### Lesson 5:

- Applications on equivalent fractions
- Analyze errors to build understanding of volume.
- Solve story problems involving fraction concepts.
- Apply understanding of equivalent fractions to solve story problems.
- Describe real-life applications of fractions and equivalent fractions.

#### ▶ Lessons 6&7 :

- Dividing using the bar models
- Story problems on division
- Solve division story problems.
- Discuss the relationship between fractions and division.
- Analyze errors to solve a division problem.
- Write a story problem to fit a given context.
- Describe real-life applications of division.

#### ▶ Lesson 8 :

- The relation between multiplication and division
- Find the missing factor in a fact family.
- Write multiplication and division equations to represent fact families.
- Explain the relationship between multiplication and division.

### Equivalent fractions of a half

### **Learn** How to find equivalent fractions to half $(\frac{1}{2})$ ?

• Equivalent fractions are fractions that name the same amount.

One way Use fraction strips.

Line up the strips of the same type to show the same size as  $\frac{1}{2}$ .

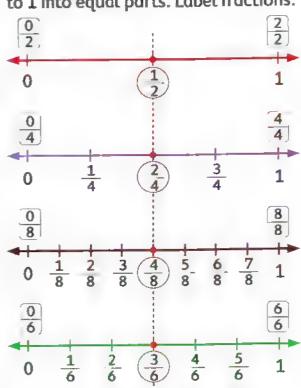

$$\frac{1}{2} = \frac{2}{4} = \frac{4}{8} = \frac{3}{6}$$

Second way Use number line.

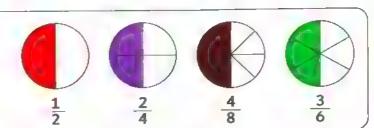

Draw number lines such that each 0 and 1 are line up and divide each distance from 0 to 1 into equal parts. Label fractions.

#### Third way Use fraction models.

The colored parts in all circles are equal.

$$\frac{1}{2} = \frac{2}{4} = \frac{4}{8} = \frac{3}{6}$$

Learn 1 Equivalent fractions using fractions strips and models

#### Example 1 Materials : Fraction strips

What is an equivalent fraction for  $\frac{1}{4}$ ?

#### Step 1

Start with the strip for 1 whole. Line up a  $\frac{1}{4}$  fraction strip.

#### Step 2

Use  $\frac{1}{8}$  fraction strips to match the length of the strip for  $\frac{1}{4}$ .

#### Step 3

Count the number of  $\frac{1}{8}$  strips that equal  $\frac{1}{4}$ .

Write the equivalent fraction.

Count:  $\frac{1}{8}$ ,  $\frac{2}{8}$ 

Write:  $\frac{1}{4} = \frac{2}{8}$ 

Be sure that the

fraction bars are lined up at the left.

### Example 2 Materials: Fraction strips

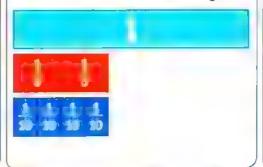

What is an equivalent fraction for  $\frac{2}{5}$ ?

Start with the strip for 1 whole. Line up two  $\frac{1}{5}$  strips for  $\frac{2}{5}$ .

#### Step 2

Use  $\frac{1}{10}$  fraction strips to match the length of the strip for  $\frac{2}{5}$ .

#### Step 3

Count the number of  $\frac{1}{10}$  strips that equal  $\frac{2}{5}$ . Write the equivalent fraction.

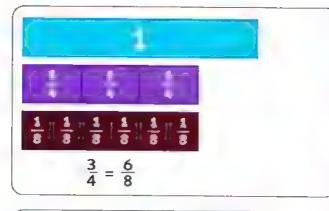

#### Count:

 $\frac{1}{10}$ ,  $\frac{2}{10}$ ,  $\frac{3}{10}$ ,  $\frac{4}{10}$ 

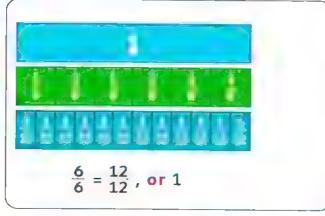

Write:  $\frac{2}{5} = \frac{4}{10}$ 

#### More Examples

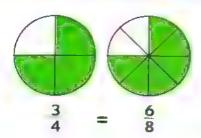

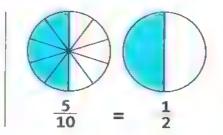

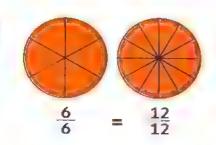

#### You can also use fraction models.

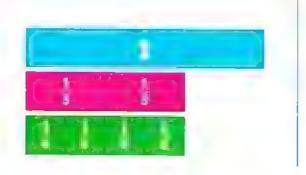

### Check (

### What fraction is equivalent to $\frac{2}{3}$ ?

### Learn 2 Equivalent fractions using multiply or divide

- You can multiply both the numerator and denominator of a fraction by any number except zero to find equivalent fractions.
- If the numerator and denominator have a common factor, you can also divide both by that factor to find an equivalent fraction.

#### Find fractions that are equivalent to $\frac{4}{6}$ .

#### One way

Multiply the numerator and the denominator by the same number.

Try 2: 
$$\frac{4}{6} = \frac{4 \times 2}{6 \times 2} = \frac{8}{12}$$

So,  $\frac{8}{12}$  is equivalent to  $\frac{4}{6}$ .

#### **Another way**

Divide the numerator and the denominator by the same number.

Try 2: 
$$\frac{4}{6} = \frac{4 \div 2}{6 \div 2} = \frac{2}{3}$$

So,  $\frac{2}{3}$  is equivalent to  $\frac{4}{6}$ .

### Learn 4 Patterns of equivalent fraction

Discover the equivalent fraction to  $\frac{1}{2}$ .

#### Your recognize that:

- The denominator is twice (double) of the numerator.
- The numerator is half of the denominator.

The numerator increases by one in each subsequent fraction and denominator increases by two.

### Check (

Complete the fraction and describe each of the following patterns. The first one is done for you.

# Equivalent fractions with the number line

### You can use the number line to find the equivalent fraction. For example :

Draw a number line divided into thirds, and one below it divided into sixths.

There are
many ways to write 1
as a fraction in every
case, the numerator
and denominator
are the same.

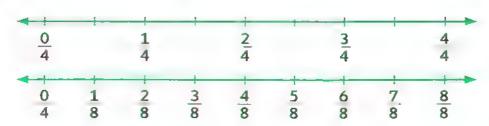

Fractions that line up above each other are equivalent, we observe that :

$$\frac{0}{3} = \frac{0}{6} = 0$$
 ,  $\frac{1}{3} = \frac{2}{6}$  ,  $\frac{2}{3} = \frac{4}{6}$  ,  $\frac{3}{3} = \frac{6}{6} = 1$ 

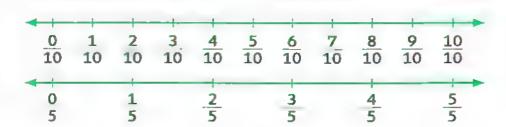

### Check (

# Applications on equivalent fractions

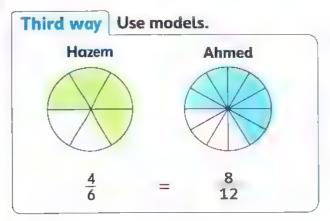

Hazem and Ahmed bought a pizza for each of the same size, if Hazem's pizza is divided into sixths, Ahmed's pizza is divided into twelfths, and Hazem ate 4 pieces from his pizza, how many parts of pizza should Ahmed eat to be equivalent what Hazem ate?

#### Notes for parents

• Give your child two equivalent fractions (as :  $\frac{1}{3} = \frac{2}{6}$ ), then ask him/her to write a story problem using these two fractions.

### **Applications on** equivalent fractions

### The relation between multiplication and division

#### **PROBLEM**

Bassem's pack of modeling clay has 2 rows of 5 colors.

What is the fact family for the problem?

#### Step 1

Count the number of rows and the number of colors in each row in the pack of clay. There are 2 rows with 5 colors in each row.

#### Step 2

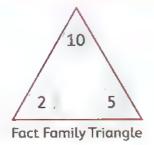

Make an array with 2 rows of 5. Count the total number of tiles. There are 10 tiles.

#### Step 3 -

Write two multiplication equations and two division equations that describe the array.

$$2 \times 5 = 10$$
  $10 \div 5 = 2$   
 $5 \times 2 = 10$   $10 \div 2 = 5$ 

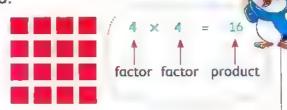

So, these related number equations make the fact family for 2, 5 and 10.

The array shows the fact family for 4, 4 and 16.

Since both factors are the same, there are only two number equations in this fact family.

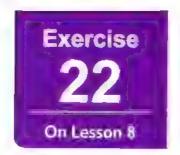

$$4 \times 4 = 16$$

$$16 \div 4 = 4$$

#### Notes for parents

· Ask your child to write another set of numbers that has only two number sentences in the fact family for it.

## **Outcomes of chapter eleven:**

At the end of chapter eleven, your child will be able to:

#### ▶ Lesson 1:

- Multiplication facts with different strategies
- · Develop fluency in multiplying one-digit numbers.
- Identify strategies to help him/her remember multiplication facts.

#### ▶ Lessons 2 to 4:

- Story problems on multiplication and division
- Creating story problems on multiplication
- Creating story problems on division
- Investigate relationships between numbers in multiplication and division fact families.
- Write equations to represent multiplication and division relationships within a fact family.
- Explain how he/she can use the relationship between multiplication and division fact families to master math facts.
- Use a symbol to represent an unknown number in an equation.
- Write equations with one unknown number to represent story problems.
- · Solve equations with one unknown.
- Write story problems that represent given equations.
- Apply strategies to solve multiplication story problems.
- Apply strategies to solve division story problems.
- Define division.

#### Lesson 5:

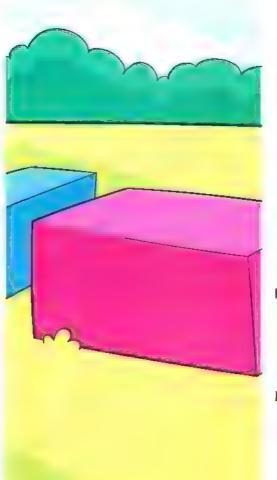

- Story problems on the perimeter and the area
- Find the area and perimeter of quadrilaterals.
- Find the perimeter of shapes that are not quadrilaterals.
- Collaborate to write class definitions of area and perimeter.

#### ▶ Lesson 6 :

- The perimeter for a given area and a side length
- Determine the perimeter of a rectangle when given the area and one dimension.

#### ▶ Lesson 7:

- Applications on the perimeter and the area
- Make a house design project to demonstrate understanding of area and perimeter.

## Multiplication facts with different strategies

You can multiply by using a variety of strategies to practice on multiplication and this is the best way to build fluency with multiplication facts.

#### Here are some useful multiplication strategies:

#### Multiplying by 0

The product equals 0

Example:  $0 \times 7$ 

 $0 \times 7 = 0$ 

The product always eauals 0

#### 1 as a factor

The product equals the same factor.

Example:  $1 \times 6$ 

 $1 \times 6 = 6$ 

The product equals the same factor.

#### 2 as a factor

O Double it

or O Skip count by 2s

Example:  $2 \times 3$ 

3 + 3 = 6

Double 3 "add 3 to itself"

or

2,4,6

or

count by 2s three times.

#### 3 as a factor

 Double and add one more group of the second factor

or o Count by 3s

Example:  $3 \times 4$ 

8 + 4 = 12

 $2 \times 4 = 8$ 

Double 4 and then add another group of 4

ОГ

3,6,9,12

or count by 3s four times.

#### 4 as a factor

Double the double.

Example:  $4 \times 6$ 

 $2 \times 6 = 12$ 

Double 6 and then

12 + 12 = 24

double the product 12 to get the product 24.

#### 5 as a factor

Count by 5s

Example:  $5 \times 4$ 

5,10,15,20

Count by 5s four times.

#### 6 as a factor

Multiply by 5 and add one more group of the second factor.

#### Example: $6 \times 7$

Multiply by 5 and add  $7 \times 5 = 35$ another group of 7. 35 + 7 = 42

#### 8 as a factor

Double 4s facts

or Multiply by 5s and 3s then add the products together "use distributive property of multiplication".

#### Example: $8 \times 6$

 $4 \times 6 = 24$ Double 4s facts and 24 + 24 = 48add 24 to itself

ог

 $5 \times 6 = 30$ 

multiply by 5 and  $3 \times 6 = 18$ multiply by 3, then add the products.

30 + 18 = 48

#### 7 as a factor

Multiply by 5 and 2, then add the products together "use distributive property of multiplication".

Example:  $7 \times 4$ 

 $5 \times 4 = 20$ 

 $2 \times 4 = 8$ 

20 + 8 = 28

Multiply by 5, multiply by 2 and add the products.

#### 9 as a factor

Finger trick.

Example:  $9 \times 6$ 

Count the fingers to the sixth finger and count 1 2 3 the rest fingers.

 $9 \times 6 = 54$ 

#### 10 as a factor

Put 0 after the other factor.

Example:  $10 \times 8$ 

 $10 \times 8 = 80$ 

Put O after 8

#### 11 as a factor

Multiply by 10 and add one more group of the second factor "use distributive property of multiplication".

Example:  $11 \times 4$ 

 $10 \times 4 = 40$ 

Multiply by 10 and add one more

or

40 + 4 = 44

group of 4.

#### 12 as a factor

Multiply by 10 and 2, then add the products together "use distributive property of multiplication".

Example:  $12 \times 6$ 

 $10 \times 6 = 60$ 

Multiply by 10 and

 $2 \times 6 = 12$ 

multiply by 2, then

60 + 12 = 72

add the products.

Ask your child which strategy does he/she prefer to use and apply.

## Learn 2 Story problems on multiplication and division

Bassem just has to look at his collection to remember the fun places he has been.

He collects a postcard from every place he visit.

#### **Examples:**

 Bassem has 4 groups of 5 postcards.

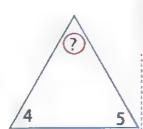

How many postcards does he have?

The problem is :  $4 \times 5 = ?$ 

So, he has 20 postcards.

Think:

 $4 \times 5 = 20$ 

Bassem puts 20 postcards in equal groups of 5.

How many groups are there?

The problem is :  $20 \div 5 = ?$ 

Think:

What number should multiply by 5 and the product is 20?

"Use fact family"

Then: 20 ÷ 5 = 4

So, there are 4 groups.

#### Tips to write a story problem:

- Think about real life situation represents the problem.
- Always end the story with a question.
- You may draw a picture to show the main idea.

#### Example:

Maria wrote a multiplication story for  $4 \times 3 =$ 

A girl had 4 cats. Her cats liked to run, jump, and play with toys. The girl bought 3 toys for each cat. How many toys did she buy?

 $4 \times 3 = 12$  She bought 12 toys.

#### **Example:**

Asser wrote a division story for  $14 \div 2 =$ 

A boy gives his dog 2 dogs treats each day. He has 14 dogs treats. How many days will the dog treats last?

 $14 \div 2 = 7$  It will last for 7 days.

Youssef wrote the opposite story problem as a multiplication story problem, is he right?

If it is wrong, correct the story to match a multiplication story problem.

Perry had 12 eggs. She used 3 eggs to make one muffin. How many muffins did she make?

 Let your child to talk about the story before writing it and figure out the situation. Use the last lessons as a guide to help in writing story problems.

i. The zookeeper is giving a talk at an auditorium about peacocks. Adam and his friends go to listen. The auditorium can hold 48 people. If there are 6 rows.

How many chairs are in each row?

Write a multiplication story problem that could be represented by the equation shown. Solve the problem to show the result.

$$\alpha. \quad 7 \times 4 =$$

#### Math tip

The multiplication story problem may include:

- Having multiple bags containing an equal number of things.
- Determining how much money you pay if you buy some things of the same price.
- Determining how many items you need to give some friends the same amount of it.

Write a division story problem that could be represented by the equation shown. Solve the problem to show the result.

The division story problem may include:

- Sharing a large group into smaller equal parts.
- Breaking up a number into equal parts.
- Asking about the quotient.

## Story problems on the perimeter and the area

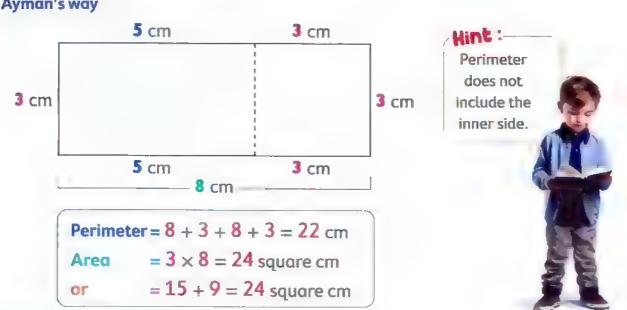

## Learn 1 Story problems on the perimeter and the area

Ayman and Huda are two friends. Each of them draw a sketch for each favorite shape and calculated the perimeter and the area of the drawn shapes.

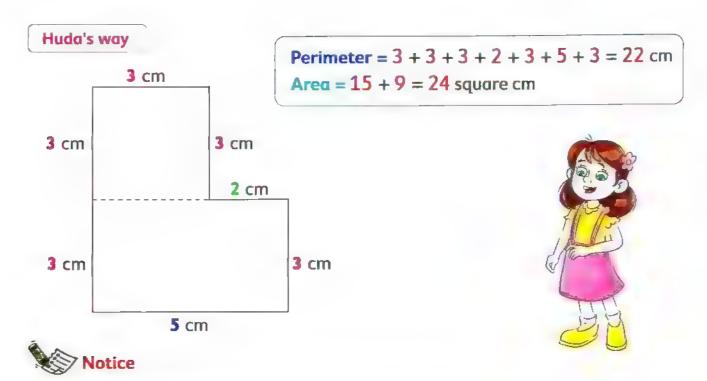

Then they laid their shapes side by side to make a new shape and calculate the perimeter and the area of the new shape.

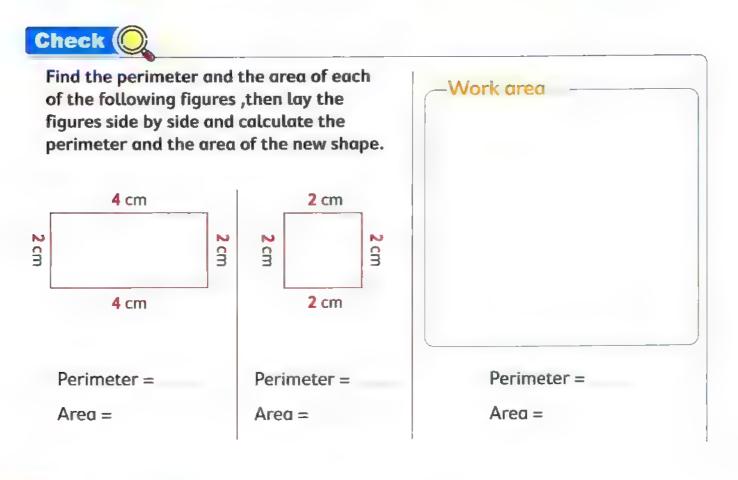

#### Notes for parents

· Help your child lay the shapes side by side with the right way and remind him/her to note that perimeter does not include the inner side.

When you lay two shapes side by side together, new area equals the sum of the two areas but new perimeter does not equal the sum of the two perimeters.

#### Notes for parents

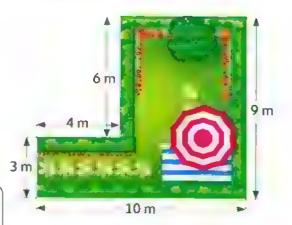

## Learn 2 Perimeter and area of complex figures

Andy wants to put a fence around his garden.

The space he will use is shown at the right.

How much fence should he buy?

What is the area of his garden?

#### Find the perimeter.

Add the lengths of the sides.

Perimeter = 10 + 3 + 4 + 6 + 6 + 9 = 38 meters

He should buy 38 meters of fence.

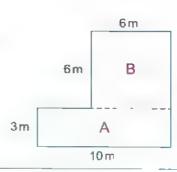

#### Find the area.

There are many ways to calculate the area.

Separate the figure into

a rectangle  ${f A}$  and a square  ${f B}$ .

#### Step 2

Calculate to find

#### Area of the rectangle A

Area =  $length \times width$ 

 $= 10 \times 3$ 

= 30 square m

#### Area of the square B

Area = side  $\times$  side

 $=6 \times 6$ 

= 36 square m

### Step 🚯

Add both areas to find the area of the whole figure.

the area of each figure.

30 + 36 = 66 square meters

The area of the garden is 66 square meters.

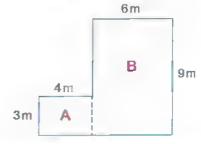

Let your child guess the other way to separate the figure which help to find the area of Andy's garden.

Ask your child to draw a complex figure and ask him/her to calculate the perimeter and the area of these drawn shapes

#### Another way to find area

Separate the figure into a rectangle A and a rectangle B.

## Step 2

#### Area of the rectangle A

Area = length × width = 4 × 3 = 12 square m

#### Area of the rectangle B

Area = length  $\times$  width = 9  $\times$  6 = 54 square m

Add both areas to find the area of the whole figure.

Calculate to find the

area of each figure.

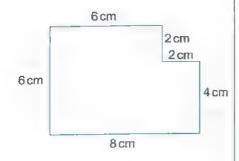

The area of the garden is 66 square meters.

# Check (

Use your preferred way to find the perimeter and the area of the opposite figure.

#### Ask Yourself

- How can I divide the figure into squares and rectangles?
- How should I label the answer?

## Learn 3 Equal perimeters

- There are more than one figure that look different but have the same perimeter.
- All the following figures have the same perimeter of 12 cm.

Rectangle with 4 cm length and 2 cm width.

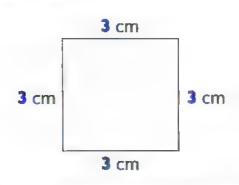

Rectangle with 5 cm length and 1 cm width.

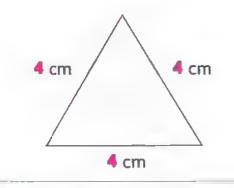

**Perimeter** = 
$$2 + 4 + 2 + 4 = 12$$
 cm

**Perimeter** = 
$$1 + 5 + 1 + 5 = 12$$
 cm

Square with 3 cm length.

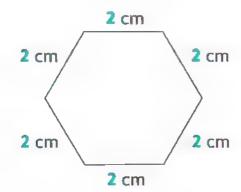

**Perimeter** = 
$$3 + 3 + 3 + 3 = 12$$
 cm

**Perimeter = 
$$4 + 4 + 4 = 12$$
 cm**

Hexagon with 2 cm length.

**Perimeter =** 
$$2 + 2 + 2 + 2 + 2 + 2 + 2 = 12$$
 cm

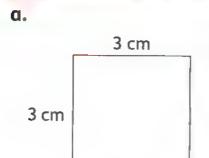

- · Ask your child to draw 2 figuers of the same perimeter of 16 cm.
- Remind your child with the names of the polygons he/she studied before like (triangle, quadrilateral, pentagon, hexagon, heptagon, octagon)

# The perimeter for a given area and a side length

How to find the perimeter of a rectangle knowing its area and the length of one dimension.

### Example

• Find the perimeter of the following rectangle.

## Answer

 You need finding the rectangle width to find its perimeter.

Width = Area 
$$\div$$
 Length  
= 24  $\div$  6 = 4 cm

The perimeter = 
$$2 \times (length + width)$$
  
=  $2 \times (6 + 4) = 2 \times 10$   
=  $20 \text{ cm}$ 

Perimeter of a rectangle
 2 × (length + width)

 Outline your dream house by drawing the outside walls. Your dream house should be a compound figure with all right corners.

Think about the needed rooms in your house and how big or small should be each room.

 Partition your dream house into rooms. Each room must be a rectangle or a square.

Label and color each room.

Find and record the perimeter and area of each room.

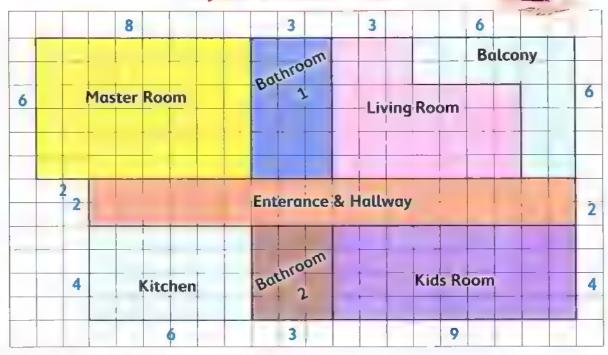

Add the area of all of your rooms to find the total area of your dream house.

#### Notes for parents

**Example** Sylvia drew her dream house design.

## Sylvia's dream House

### Sylvia recorded the places she draw and calculate the area and the perimeter.

Place	Area	Perimeter
Master Room	$6 \times 8 = 48$ square units	6 + 8 + 6 + 8 = 28 units
Bathroom 1	$6 \times 3 = 18$ square units	6 + 3 + 6 + 3 = 18 units
Living Room	(6 × 3) + (4 × 4) = 18 + 16 = 34 square units	6 + 3 + 2 + 4 + 4 + 7 = 26 units
Balcony	$(2 \times 6) + (4 \times 2) = 12 + 8$ = 20 square units	2 + 6 + 6 + 2 + 4 + 4 = 24 units
Enterence & Hallway	$2 \times 18 = (2 \times 10) + (2 \times 8)$ = 20 + 16 = 36 square units	2 + 18 + 2 + 18 = 40 units
Kitchen	$4 \times 6 = 24$ square units	4+6+4+6 = 20 units
Bathroom 2	$4 \times 3 = 12$ square units	4 + 3 + 4 + 3 = 14 units

#### ▶ Lesson 1:

#### Creating halves with non-routine ways

- Color shapes to generate unconventional halves.
- Apply understanding of area and fractions to solve story problems.

#### ▶ Lesson 2 :

#### Ordering fractions using the number line

- Order fractions on a number line.
- Generate questions or problems to review Primary 3 math.

#### ▶ Lesson 3:

#### **Applications on numbers**

- Solve place value problems.
- Generate questions or problems to review Primary 3 math.

#### Lesson 4:

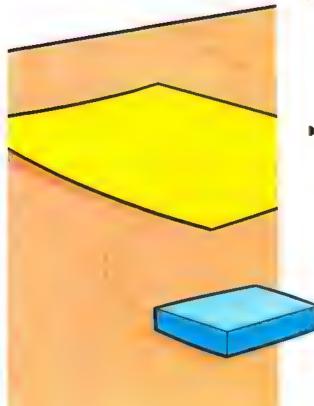

#### Elapsed time

- Solve Elapsed time problems.
- Generate questions or problems to review Primary 3 math.

#### ▶ Lesson 5 :

#### Applications on data representations

- Collect and record data in a table.
- Use collected data to make a line plot.
- Use collected data to make a bar graph.
- Analyze graphs to answer questions about the data.
- Compare the effectiveness of line plots and bar graphs to display data.
- Generate questions or problems to review Primary 3 math.

## Learn 2 How to find half of rectangle's area

Andy's garden is 6 meters long and 4 meters wide. If Andy needs to put a pool in the half of his garden, what is the area of the pool?

The area of the pool is half the area of the garden.

#### First way

Find the area of the garden, then divide it by 2 to find the half of it.

Area of garden

$$=6\times4$$

= 24 square meters

Area of half of garden

$$= 24 \div 2$$

= 12 square meters

#### Second way

Divide the length by 2 to get two small rectangles and find the area of one rectangle of them.

$$6 \div 2 = 3$$

$$3 \text{ m} \qquad 3 \text{ m}$$

$$4 \text{ m}$$

Area of half of garden  $= 3 \times 4 = 12$  square meters

#### Third way

Divide the width by 2 toget two small rectangles and find the area of one rectangle of them.

Area of half of garden  $= 6 \times 2 = 12$  square meters

So, the area of the pool is 12 square meters.

## Check Q

How can you place proper fractions with common denominators on the number line?

For example

You can place:  $\frac{3}{8}$ ,  $\frac{1}{8}$ ,  $\frac{5}{8}$ ,  $\frac{4}{8}$ ,  $\frac{8}{8}$  on the number line as follows.

- Divide the number line in 8 equal parts as the number in denominator.
- Place the given fractions on the number line.

#### Second

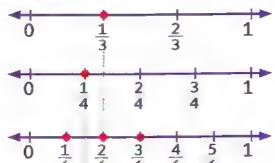

How can you place proper fractions with different denominators on the number line?

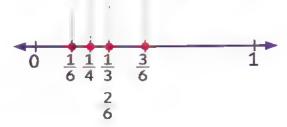

For example

You can place:  $\frac{3}{6}$ ,  $\frac{2}{6}$ ,  $\frac{1}{4}$ ,  $\frac{1}{3}$ ,  $\frac{1}{6}$  on the number line as follows.

#### One way

- Draw a number line divided into thirds, one divided into fourths and another one divided into sixths.
- Place  $\frac{1}{3}$  on the top number line,  $\frac{1}{4}$  on the second number line, and  $\frac{3}{6}$ ,  $\frac{2}{6}$ ,  $\frac{1}{6}$  on the third number line.

Look at the number line below. Then find at least three other equivalent fractions that could be placed on the number line and record them (Do not list any more equivalent fractions for  $\frac{3}{6}$ ).

## **Applications on numbers**

#### Remember 1

#### Place value

Writing and reading numbers up to 6 digits.

Place value chart :

•		<b>331</b> ,	073)	\	
Hundred thousands	Ten thousands	Thousands	Hundreds	Tens	Ones
5	3	1	6	2	9

### Remember 2

#### Creating greatest and least number from given digits

How to create the greatest and the least number from the digits 4, 5, 9, 0, 1

To create the greatest number from given digits, arrange the digits from greatest to least.

The order is: 95410

So, the greatest number is: 95,410

Do not put the 0 digit in the highest place value.

To create the least number from given digits, arrange the digits from least to greatest.

The order is : 10459

So, the least number is: 10,459

Chapter 12 Lesson 3

**Notes for parents** 

Tell your child any number and ask him/her to represent it in different forms

## Remember 3

#### Comparing numbers

Compare 52,349 and 52,617

Begin at the left. Compare.

52,349 **52,617** 

Both numbers have

Find the first place where

52,349

3 nundreds is less 52,617 than o hundreas.

the digits are different. Compare.

When comparing numbers, the number which has more number of digits

is the greater. 5843 > 798

## Check (

1. Write in expanded form.

2. Write the greatest and the least 5 digit number formed form 3,7,8,0,9

The greatest number is

The least number is

Write in a descending order.

The order is:

- Tell your child two numbers and ask him/her to compare between them.
- Ask your child to tell you two numbers one greater and one less than (28,512).

  - **b.** The product of 5 times 0 is in my Tens place, and my Hundreds place holds the product of 3 times 2. Put a 2 in my Ones place and tell me who I am.

## Elapsed time

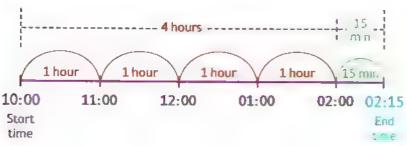

- Elapsed time is the time that passes from the start to the end of an activity.
- You can use a time line to find elapsed time.

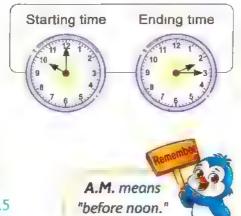

## Example 1

Sara arrived at the mall at 10:00 A.M. She leaved the mall at 02:15 P.M.

How long did she spend at the mall?

**So,** Sara spent 4 hours and 15 minutes.

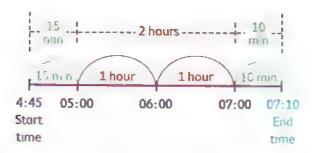

P.M. means

"after noon."

### Example 2

Ziad arrived at the library at 04:45 P.M. He leaved the library at 07:10 P.M.

How long did he stay at the library?

so, Ziad stayed 2 hours and 25 minutes

#### Notes for parents

- Help your child find the elapsed time using a time line.
- Help your child find the elapsed time, ask him to find the elapsed time "from 09:00 P.M. to 06:00 A.M." as his/her sleeping time.

### Example 3 Find the ending time.

Jana and her mother get on the bus at 02:30 P.M. Their ride home from the garden lasts 35 minutes. What time do they get home? Count forward on a clock.

02:30 P.M. and 35 minutes more - 03.05 P.M.

#### Math tip

When counting forward on a clock, increase one hour for each cross on 12.

So, they get home at 03:05 P.M.

### Example 4 Find the starting time.

Nora and her son hiked for 45 minutes. They stopped for a snack at 10:10 A.M. When did they start hiking? Count backward on a clock.

#### Math t.p

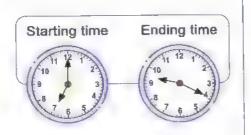

When counting backward on a clock, decrease one hour for each cross on 12.

So, they started hiking at 09:25 A.M.

A television cartoon movie begins at 07:00 P.M. and ends at 09:20 P.M. Find the elapsed time.

- Remind your child that 1 day = 24 hours, 1 hour = 60 minutes, half of an hour = 30 minutes.
- · Let your child use clock model drawings or time line to find the elapsed time.
- Remind your child that counting backward or counting forward is useful way to find the starting or ending time.

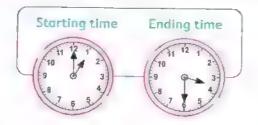

## Elapsed time

a. Kamal's family took a road trip. They left at 07:30 A.M. and danger of the state	
b. Kamal's family spent 30 minutes eating lunch before they got bac What time did they start driving again?	ck on the road
Madiha made a cake for her sister's birthday. It took her 25 min it, 45 minutes to bake, and then another 30 minutes to frost it.  How long did it take Madiha to complete the cake?	nutes to mix
Heba spent 3 hours at dance practice. She finished at 06:10 P.M. What time did she start?	1.
☐ Answer the following question as the example.  Example:	
Ziad woke up at 07.00 A.M. He has to leave at 08:00 A.M for school 20 minutes to eat breakfast, 5 minutes to brush his teeth and hair 10 minutes to pack his bag. If he wanted to watch a 30-minute compared to the school of the	r, and
Would he have enough time before he leaves for school?	20

• The rest time till the time of going school = 60 - 35 = 25 minutes He would not watch a cartoon for 30-minutes He could watch for 25 minutes or less.

Sandy did her homework. She took 30 minutes for math, 4° minutes for Arabic and 35 minutes for English.

#### How long did she take to finish her homework?

If Sandy started at 4:00 P.M., would she have enough time before her karate class which starts at 6:00 P.M.?

## Challenge 6

- 9 Hany had football practice after school. He left school at 3:30 P.M. He walked for 15 minutes to the field, practiced for an hour and a half, and then walked minutes home. What time did he get home?
- Samy comes home from school and starts his homework. It takes him 22 minutes to do his math, 37 minutes to read, and he has a science experiment that takes 18 minutes. Hala has the same homework. She takes 15 minutes to do her math, reads for 37 minutes, and then the science experiment only takes her 11 minutes.
  - a. How long does it take Samy to finish all his homework?
  - b. How long does it take Hala to finish all of her homework?
  - C. How much longer did Samy take to do his homework?

# Applications on data representations

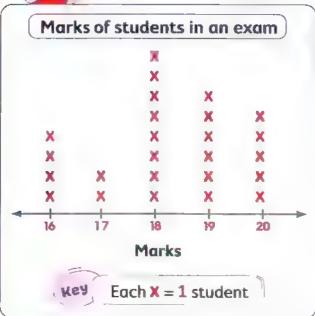

Data can be represented by more than one way.
 This is a survey about students marks in an exam.

#### The data is organized in a tally table.

1 The following table shows the roll of dice 35 times. Represent the data by a line plot.

Dice rolls Times Number Tally JH | 1 5 2 9 3 8 4 5 6 4

a. Which number is rolled the most?

Dice rolls

- **b.** Which number is rolled the least?
- c. How many times shows an even number?
- d. How many times shows an odd number?
- e. What is the difference between the total even rolls and total odd rolls?

Even number such as: 0, 2, 4, 6, 8, \_\_\_\_

Odd number such as: 1, 3, 5, 7, 9,

## b. The problem equation: $8 \times 6 = \cdots$

Estimation	Actual St.
Suppose 8 as 10	
$10 \times 6 = 60$ eggs	
The actual product	$8 \times 6 = 48 \text{ eggs}$
must be less than 60	

#### c. The problem equation: $15 \times 7 = \cdots$

Estimation —	Actual Solution
Suppose 7 as 10	$15 \times 7 = 7 \times 15$
15 × 10 = 150 minutes The actual product must be less than 150	$= 7 \times (10 + 5)$ = $(7 \times 10) + (7 \times 5)$ = $70 + 35$ = $105$ minutes

# 5 The problem equation: $4 \times 3 \times 2 = \cdots$

#### Actual Solution: 24 Estimate: 30 Suppose 4 as 5 $4 \times 3 \times 2 = 4 \times (3 \times 2)$ $5 \times 3 \times 2 = 5 \times (3 \times 2)$ $= 4 \times 6 = 24$ buttons $= 5 \times 6 = 30$ buttons The actual product must be less than 30

Perimeter of one rectangle = 14 cm

Area of one rectangle = 10 square cm

Perimeter of three rectangles = 22 cm

Area of three rectangles = 30 square cm

## Exercise 26

- 1 a. Length =  $10 \div 2 = 5$  cm Perimeter =  $2 \times (5 + 2) = 14$  cm
  - b. Width =  $14 \div 7 = 2 \text{ cm}$ Perimeter =  $2 \times (7 + 2) = 18 \text{ cm}$

- 2 Width =  $30 \div 6 = 5$  cm Perimeter =  $2 \times (6 + 5) = 22$  cm Perimeter =  $2 \times (10 + 3) = 26$  cm

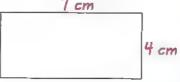

Answer may vary

3 cm

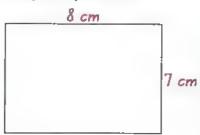

Width =  $24 \div 6 = 4$  cm Perimeter =  $2 \times (6 + 4) = 20$  cm Perimeter =  $2 \times (8 + 3) = 22$  cm

Length =  $28 \div 4 = 7$  cm Perimeter =  $2 \times (7 + 4) = 22$  cm

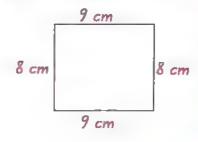

5 Width =  $56 \div 8 = 7$  cm Perimeter =  $2 \times (8 + 7) = 30$  cm

Perimeter = 5+5+5+5+5+5+5+5= 40 cm

Area of total shape = 25 + 25 + 25 + 25= 100 square cm

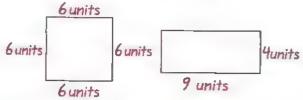

The length =  $72 \div 9 = 8$  cm The perimeter =  $2 \times (9 + 8) = 34$  cm

Shape one

Shape two

Perimeter of the square = 6+6+6+6 \* 24 units Perimeter of the rectangle

$$(4 \times 2) \times 1 = 8 \times 1 = 8$$

c. 
$$6 \times (2 \times 4) = 6 \times 8 = 48$$

d. 
$$(5 \times 1) \times 7 = 5 \times 7 = 35$$

e. 
$$3 \times (2 \times 2) = 3 \times 4 = 12$$

f. 
$$4 \times (5 \times 2) = 4 \times 10 = 40$$

2 a. 
$$5 \times (10 + 2) = (5 \times 10) + (5 \times 2)$$
  
=  $50 + 10 = 60$ 

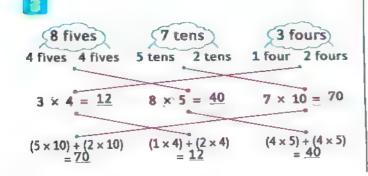

b. 
$$4 \times (10 + 3) = (4 \times 10) + (4 \times 3)$$
  
=  $40 + 12 = 52$ 

c. 
$$2 \times (10 + 6) = (2 \times 10) + (2 \times 6)$$
  
=  $20 + 12 = 32$ 

d. 
$$3 \times (10 + 8) = (3 \times 10) + (3 \times 8)$$
  
=  $30 + 24 = 54$ 

e. 
$$7 \times (10 + 1) = (7 \times 10) + (7 \times 1)$$
